

Features of PACTware 4.1

The FDT frame application PACTware 4.1 (version 4.1.0.26) was released on 2.11.2011 by the PACTware Consortium e. V..

Main features:

- The following MS Windows operating systems (32 Bit and 64 Bit) are supported:
 - Windows XP, XP SP1, XP SP2, XP SP3
 - Windows Vista
 - Windows 7
- Language selection for the user surface:
 - de, en, fr, sp, ru, nl
- Online help in the languages:
 - de, en, fr, sp, ru
- Parallel installation of PACTware 4.1 and 4.0 is not possible. If the previous version PACTware 4.0 is on the computer during the installation, then this version will be replaced. Other versions remain.

Revisions or completions compared to the previous version PACTware 4.0:

- The use of the function "Diagnostic Scan" for simple plant monitoring allows now also the simultaneous use of other individual PACTware functions. The DTMS require s special interface for recording the diagnosis status.
- The function "Topology Scan" allows the search in the device network with automatic configuration of a project structure. The standard scan mechanisms according to FDT 1.2 and FDT 1.2.1 are used.
- Projects can be now stored as templates for the later use with Startup-Wizard.
